

Foot Care for Your Horse

Wednesday 4th March 2014
Whitehills Surgery, Hook Norton OX15 5DF
11am-3pm

A horse's hoof is a highly sophisticated part of the horse's anatomy having evolved to support and cushion the weight of the horse and to constantly replace any wear sustained during normal use. Looking after your horse's hooves properly is therefore a critical part of keeping your horse fit, healthy and performing at his or her best.

This practical, interactive workshop is tailored at horse owners who would like to know more about the anatomy and function of the equine foot, and to feel confident addressing foot-related problems. Limited to 8 places to ensure that plenty of opportunity is given to practice the skills learnt and for group discussion.

- The workshop will cover:
- Anatomy of the foot and surrounding structures;
- Common conditions of the foot;
- Management to promote healthy feet;
- Overview of remedial shoeing and foot balance
- Practical skills including poulticing and removing shoes.

The cost is £60.00 per person which includes refreshments and a comprehensive Foot Care fact book to keep for reference

To book your place visit www.equineskills.co.uk or contact the EquineSkills team on 01765 608489 / training@xlvets.co.uk

Places are limited so early booking is advised
